

# DRS2 Release Notes for Version 2.6 (May 2015)

This document describes new features, bug fixes and known issues in the latest release.

<b>Key New Features .....</b>	<b>1</b>
<b>Enhancements and Bug Fixes in Detail.....</b>	<b>1</b>
<b>Known Issues.....</b>	<b>2</b>

## Key New Features

- Better support for managing and downloading sensitive data in Web Admin
- Ability to bulk update metadata for DRS files and objects (Billing Code, Access Flag)
- Many improvements to Web Admin search UI based on user feedback
- New version of Batch Builder (2.0.59) with many enhancements based on user feedback

## Enhancements and Bug Fixes in Detail

### Web Admin:

- Users with appropriate role can now download objects and batches with sensitive content
- Users with appropriate role can now bulk update metadata for files and objects (Object Billing Code and File Access Flag fields)
- Many improvements to search UI including:
  - CSV file upload function is now in a separate section of the screen
  - Can now hide and expand search results
  - All search results actions are now in one drop-down menu
  - Can now deselect search results by page
  - List of results is now scrollable within viewable screen space
  - Faster load times for initial search screen on first login
  - Facets values are now sorted alpha-numerically
  - Successive file, object and batch summary pages now reload in the same tab when another DRS ID is clicked from the search results
  - Added Owner Code and Billing Code columns to default search results display
  - Selected search results items now change color to be more visible
- Empty thumbnail icon removed from single item displays

- Footer copyright statement now displays current year

**Batch Builder:**

- Added support for new {objectName} URN mask for PDS objects
- Main content and related rights objects can be processed and deposited in the same batch
- Font size normalized across Batch Builder GUI
- Batch Builder now accepts JPEG files with extension “.jpeg”
- NLNZ WAV file metadata extraction errors no longer clutter command line output

**DRS2 Services:**

- Added support for new “Packet” content model for EAS deposits
- Batch ingest errors now include the name of the file that generated an error
- Related rights objects in DRS can be now referenced on ingest by Object Name
- Faster transaction processing time for bulk operations
- Reworked bulk edit CSV report files to better handle warnings

## Known Issues

See also the list of known issues in the [Release Notes for DRS2 version 2.5](#).

**Web Admin:**

- When bulk downloading large number of items from search results a download may fail due to the limited amount of database temp table space on the server
  - The workaround is to download content in smaller sets

**Batch Builder:**

- In PDS Document Object content model, when assigning IDS URNs to JPEG or JP2 images, the {fileName} as well as time-based URN masks result in duplicate URN error due to the URN requests including the same file name or same time stamp.
  - The workaround is to use the {n} URN mask for IDS URN assignment for PDS Objects
