

Lifecycle Tools for Archival Email Stewardship

Tool Name	SUPPORTED ACTIVITIES											
	Collection Development	Accessioning		Archival Processing				Preservation		Access		
	Pre-Acquisition Appraisal	Capture	Normalization (from native email format for preservation or processing)	Item-level processing: - Email message - Attachments - Message + Attachments	Bulk processing - Email message - Attachments - Message + Attachments	Intellectual Arrangement	Search Capability: - NLP - Full-text - Fielded - Other	Personal/Sensitive Information Processing: - Identify access-restricted data (e.g., PII) - Redact access-restricted data	Packaging	Repository	Online Discovery	Access
	Software-supported bulk analysis and selection of email (and attachments) to be ingested.	Automated function to ingest directly from source (ex. server, other). *See Glossary tab	Converting ingested email messages into pre-selected formats	Ability to process individual messages and/or attachments	Ability to perform batch processes on an aggregated set of messages and/or attachments.	Ability to reproduce the "original order" or other logical arrangement of the email messages	Ability to retrieve a list or set of relevant messages based on one or more attributes	Software-supported identification and/or redaction of content that is access restricted	Ability to create logical or self-describing package	Ability to connect with repository storage with digital preservation services for long term preservation	Ability to allow the discovery of messages and/or attachments through the Internet	Ability to provide access to messages and/or attachments
CERP Parser				Email message	Email message							
DArcMail				Email message	Email message		Fielded					
EMCAP		Server Version Only		Email message	Email message					Server version only		
Archivematica				Message + attachments	Message + attachments							
PeDALS				Email message	Email message		Other: not declared					
ePADD				Message + attachments	Message + attachments		NLP; fielded; full-text; lexicon	Identification (Reg. Ex.)				
EAS				Message + attachments	Message + attachments		fielded; full-text	Identification (Reg. Ex.)				
eMailchemy												
MailStore Server				Message + attachments	Message + attachments		Full-text					
AccessData FTK				Message + attachments	Message + attachments		Full-text	Identification (Reg. Ex.)				
ZL Unified Archive				Message + attachments	Message + attachments		Full-text					
Preservica Standard				Message + attachments	Message + attachments		Other: not declared					
Paraben Email Examiner				Message + attachments	Message + attachments		Other: not declared					
Aid4Mail Professional							Other: not declared
