On November 20th, the iCommons team released several add-ons and one enhancement for the Harvard Wikis:

- The [Diagram.ly plugin](#) allows Wiki users to create mind maps, flowcharts, organizational charts, and other diagrams. You can choose to add a diagram to an existing page by adding the Diagram.ly macro or you can add a blank page with a diagram by clicking on the “Create” button at the top of the screen.
- The [Survey and Vote macros](#) allow users to rate and vote on content.
- The Disable Commenting macro prevents comments from being added to a page.
- On the Wiki dashboard, a notification will be displayed to logged-out users.
